Energy-saving and green ISS policy

Considering information systems security, as well as environmental impacts, are legal, industrial and commercial requirements.

Indeed, regulation which is continually strengthened, as well as the demands of our clients, mean we are required to ensure the security, integrity, confidentiality and availability of information systems, and to be clean producers by reducing energy consumption at our facilities. In order to do this, we are committed to carry out the following actions:

Information systems security:

- ✚ Ensure compliance with current regulations
- ✚ Adopt an approach of continuing improvement in the field of information security
- ✚ Aim to permanently minimise the risks linked with information security and to integrate this concern during the development of our infrastructure and of tools that we make available to our clients and/or that we use internally
- ✚ Prioritise security prevention
- ✚ Control access to the company's networks and services

Based on the actions already carried out and on the risk analysis carried out on infrastructure, the main objectives will aim to:

- ✚ Ensure entirely secure access for our clients to their infrastructures
- ✚ Avoid any loss of information data which could cause a malicious act or incident
- ✚ Involve our suppliers/ providers in our approach
- ✚ Ensure the availability, integrity and confidentiality of the data of interested parties

On energy and environmental plans, we are committed to carry out the following actions:

- ✚ Ensure compliance with current regulations
- ✚ Adopt an approach of continuing improvement in the fields of energy and the environment
- ✚ Aim to permanently minimise the impact of our services on the environment and to integrate this concern when it comes to our purchases
- ✚ Prioritise pollution prevention

Based on the actions already carried out and on the environmental risk analysis carried out on our sites, the main objectives will aim to:

- ✚ Reduce energy consumption whenever technologically and economically possible
- ✚ Preserve natural resources
- ✚ Prioritise pollution prevention
- ✚ Involve our suppliers/ providers in our approach
- ✚ Comply with environmental and energy regulations

This policy is drawn up within a management logic which contributes to making our clients secure and differentiating us from our competitors. It allows us to advance and enhance our professionalism, while bringing our partners together around common objectives focused on information systems security, energy savings and respecting the environment.

Responsibility for the implementation and monitoring of this policy falls to Mr Alexandre PATTI, who is our representative for matters concerning information systems security, energy and the environment.

Our long-term approach requires the commitment and mobilisation of everyone.

The Management is committed to ensuring the implementation of this energy-saving and green ISS policy and its smooth operation, to making the necessary resources available to meet the target and objectives, as well as constantly promoting our progressive approach.

The Management
